Established in 1999, Rapid Care Group's Rapid Care Med Review provides medical record sorting, indexing, chronology and summaries produced from its wholly owned ISO 27001:2013 certified facilities by a team of 250+ clinical professionals to clients in the US. Typical turnaround time to prepare comprehensive medical chronologies varies from 24 to 72 hours.

Rapid Care Group is keen to process your requirement, to share your workload for faster turnaround and efficient cost-effective outcomes that are mutually beneficial. Team can replicate the required reports to specification and would love to begin on a proof of concept and go from there.

Service features

The complete medical records file will be organized chronologically and by GP/Hospital/Other Practitioner and paginated for ease of reference aided by creation of an index. Every document in the records file will be rigorously examined and reviewed and a detailed chronology is created. Duplicate documents are removed and illegible records are identified. A schedule of all records reviewed is also produced.

The chronology identifies times of treatment, all pertinent medical issues pre and post event, all diagnostics, lab results, consultations, procedures, operative reports, primary care records, clinical and hospital encounters, besides collating all other categories of records such as education, social services records, prison records, nursing home records, and more. The chronology is fully referenced to the index and can include a summary of the key medical facts in the chronology briefly stated.

The service is flexible and can be tailored to your needs. Your instructions and statements will guide the team to be precise and relevant. You get a fast and reliable service with the chronology returned in 5 working days. The turnaround can be arranged for an urgent delivery with prior agreement.

Fact Sheet – Medical Record Review

What is Medical Record Review?

1. Medical record review is the process of review, collection, analysis, and presentation of all available medical record documentation that is critical and vital.
2. This is accumulated typically from voluminous medical records from multiple providers that are not in order and may include huge volumes of printed and handwritten pages.

ISO/IEC 27001:2013
